

MIRO™ | Casement Latch
Casement Latch

Key Features

- The MIRO™ Casement Latch is designed to suit residential, architectural and Elevate™ commercial awning and casement windows.
- This fastener is curved similar to a gum leaf.
- Available in a range of standard or special powder coat finishes.
- The retention wedge folds up to cam lever when opened. This is a significant feature in that there is no fixed keeper on the frame.
- Matching hinged door lever furniture.

MIRO™ cam latch can be fitted to awning and casement sashes. The latch is available left or right hand.

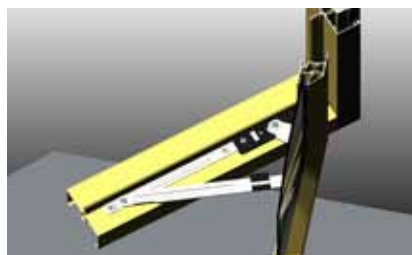

As the MIRO™ lever is operated the nylon retention folds up and allows the sash to swing open.

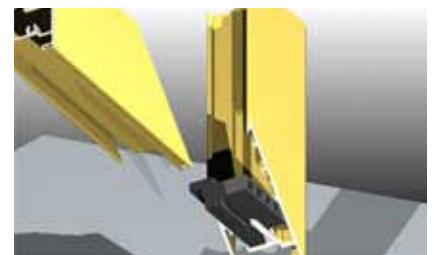

Elevate™ Commercial awning windows are fitted into custom sub-sill. This sub-sill is designed to go into residential installations - brick veneer as shown above or brick veneer.

We offer a range of heavy duty sashes that can be fabricated in large sizes and are supported on heavy duty four bar friction stays.

Elevate™ Commercial casements are supported on heavy duty four bar stainless steel stays.

Elevate™ Commercial awning and casement sashes are fabricated with heavy duty nylon corner stakes. These keep the joints tight and waterproof.
