

**MIRO™ | Sliding Door Handle**  
Sliding Door Handle

**Key Features**

- The MIRO™ sliding door 'D' handle is ideal for residential sliding door applications. This handle is typically used in conjunction with a separate key lock or a snib latch in high traffic areas.
- The lock is separate from the handle and is operated by key or snib.
- MIRO™ furniture is powder coated in a large range of colours to match the door.

MIRO™ pulls are fitted both sides of the stile. . The pulls are used with multi point mortice lock or commercial sliding door locks.

On bi-parting doors without internal stile stiffener we can fit pulls on the keeper stile.

We have designed custom injection moulded nylon spacers to position the spring loaded lock keeper in the right location.
